FISHING ROD CARRYING SYSTEMS

PATENTS PENDING

Selecting the proper size rod carrier

- Along with the three types of carriers (QUADRODZ, TRIRODZ, BIRODZ), there are TWO sizes available for each. The two sizes are S/M (small/medium) and M/L (medium/large).
- The appropriate size (S/M or M/L) is determined by the **LARGEST** diameter of the rod blank. This is usually right above the rod grip.
- The guidelines for choosing the correct size are as follows:
 - S/M is used for rod blank diameters of .625" (16mm) and smaller.
(Small spinning rods, fly rods, jigging rods, small bait casting rods. **Mostly freshwater and inshore.**)
 - M/L is used for rod blank diameters of .625" (16mm) and larger.
(Large spinning rods, trolling rods, live bait rods, bottom fishing rods. **Mostly saltwater and offshore.**)

Instructions for use

- 1) First, take notice of the two ends of the rod carrier. One end is marked "TOP" and the other end is marked "BOT" (bottom). They ARE different and designed to match the average taper of the rod. It is essential that they are placed appropriately on the fishing rod. This is to ensure that the carrier fits the rods correctly and keeps the rods parallel to each other.
- 2) Hold the carrier in one hand vertically with the bottom end closest to the ground.
- 3) Undo the Velcro straps allowing them to hang alongside the carrier.
- 4) Stand the first fishing pole in an upright position with the butt of the rod sitting on the floor.
- 5) Now snap the rod into place on the carrier. The bottom end of the carrier should be on the rod blank just above the top of the rod grip. The top should end up close to the first eye on the rod (either above or below). Repeat this action with additional rods, filling all carrier snaps.
- 6) Wrap one Velcro strap around the assembly and pull tight enough to remove all slack. Fasten Velcro back upon itself to secure. Repeat this action with other end of carrier.
- 7) CONGRATULATIONS! Your multiple rods and reels can now be carried as a single unit.
Best place to grasp is upper grip on one of the rods.

Important

- Be sure Velcro straps on carrier are securely fastened before transporting your rods and reels.
- QUADRODZ, TRIRODZ, BIRODZ are to be used only for casual transport of fishing rods and reels. **DO NOT** place our rodz products in a rod holder of a moving vehicle or vessel.
- The carrier is designed to store and transport fishing rods only (with or w/out reels).
- Be careful of any hooks or lures left on rods in carrier. Cover or remove them whenever possible. They can be hazardous to people and pets!
- **DO NOT** store multiple rodz systems into your current storage units unless they comply with the extra weight to avoid floor units from tipping and wall or hanging units from detaching.
- **DO NOT** balance rodz systems upright near the water's edge or any other place where tipping over may cause an issue. Balance rodz systems at your own risk!! Although the QuadRodz and TriRodz can balance upright on a level surface....they may still tip, be blown or bumped over.
